Table 2

Seizure Classification	Characteristics
Subclinical	Seizure activity noted on electroencephalogram (EEG) that does not have obvious physical or cognitive manifestations
Focal	Seizures that originate within networks limited to one hemisphere.
1. With dyscognitive features	• Complex partial seizures • Impaired awareness of self and environment during a seizure
2. Without dyscognitive features	• Simple partial seizures • Retained awareness of self and environment during a seizure
Generalized	Seizures that originate and rapidly engage within bilaterally distributed CNS networks.
Status Epilepticus	Any seizure that is prolonged or immediately recurrent without return of consciousness.
